FRAM System Model - Westgate Bridge Failure

FRAM System Model - Westgate Bridge Failure

KEY

Foreground functions

Background functions

I Input - activates functions

T Time - temporal constraints

C Control - regulates functions (plans/procedures)

O Output - result of a function

R Resources - (software/manpower)

P Precondition - conditions that must be fulfilled before a function can be carried out

Function carried out well

Function significant to bridge failure carried out poorly

Function contributing to circumstances of bridge failure
